## PROCESS TECHNOLOGY

### S100 SERIES THREADED / WELDED SIGHT FLOWS

#### THE CANTY ADVANTAGE

J.M. Canty S100 series threaded/welded sight flows have been engineered to meet all your process and piping needs. Our Sight flows have been designed to meet strict ASME code requirements. Canty hydro-tests all units to 150% of the maximum rated pressure and can provide certification of material and testing if required, typical of ASME code requirements for process vessels.

#### UNMATCHED SAFETY, RELIABILITY

All Canty Sight flows feature the Fuseview™ window. Our unique fused glass windows far exceed all conventional tempered glass windows in safety and performance. By fusing glass to metal, a high pressure, high safety, hermetic seal is formed. This fused glass technology ensures safety with every S100 series Sight flow. What's more, our windows can easily be removed for cleaning. Canty windows do not have to be discarded, as do traditional tempered glass windows. Canty fused glass windows can be re-used again and again.

#### UNIQUE OPTIONS

- Dual fused glass option - for high temperature applications
- Connections - Sanitary and compression fitting connections are available

#### INDICATORS

Canty S100 series flanged Sight flows are available with various indicator options, including:

- No indicator
- Rotor
- Flapper
- Drip Tube

#### FEATURES

- All Sight Flows feature Canty Fuseviews™.
- Various models feature FM approved Fuseviews™!
- Bodies designed to ASME code
- Stainless steel, carbon steel, and Hastelloy® or equal bodies
- NPT thread, straight thread, and pipe or tube weld Connections are available
- 150# though 3000# models
- Special pressures though 10,000 PSI are available

#### CANTY FUSEVIEW™ VS OTHERS

- No bolt loading on the glass. All loading is carried by the fusing ring
- The Fuseview™ Sight glass allows the use of standard process gasketing. No special gaskets are required
- No loss of glass temper over time !
- Canty Fuseviews™ may be removed for cleaning and inspection. This is not allowed with ordinary glass, due to residual stresses incurred at bolt-up

#### FEATURES OF THE FUSEVIEW™

- Extremely high strength due to radial compression on the hermetically sealed glass
- Eliminates chance of catastrophic failure due to bolt-up
- Very high impact strength due to prestressing

#### CANTY FUSEVIEW™ VS METALGLASS

- Largest view in the Industry. When you order a 4" window you get a 4" view!
- Fuseviews™ are made with excellent corrosion resistant high nickel alloys C, C276 and Hastelloy® C-22® or equal, not duplex stainless steels.
- Boro Plus™ fused glass is superior to other glass with ideal optical and fusing properties. It readily fuses to steel making a one piece hermitically sealed window capable of high pressures and temperatures.
- Ideal properties of metal and glass provides true fusion of glass to metal. This provides a stronger safer fuse that will not crack during installation or operation like borosilicate and duplex SS.
- Superior impact, thermal shock, and pressure resistance from the use of optimum materials and the proper fusing process during manufacturing.
